PART I **THE EXAMINER'S EVALUATION OF THE APPLICATION**

SECTION A **RELEVANT ART CITED BY THE EXAMINER**

1. U. S. Patent No. 6,636,985 B1 to Ono et al. describes Disk storage device and a method for processing defective sectors in a disk storage device.
2. U. S. Patent No. 6,456,452 B1 to Hobson et al. describes Feed forward compensation for repeatable head position error in a disc drive.
3. U. S. Patent No. 5,617,339 A to Smith describes Method and apparatus for detecting degradation in data storage system spindle motor performance.

SECTION B **DISTINGUISHING FEATURES RECITED IN THE CLAIMS**

The following is an Examiner's Statement of Reasons for Allowance See **MPEP 1302.14**

1. The primary reason for allowance of claims 1-8 in instant application is the combination with the inclusion of following limitations: determining a tuned value for the POR register using feedback from the data storage device; and storing the tuned value on a storage medium of the data storage device.
2. The primary reason for allowance of claims 9-24 in instant application is the combination with the inclusion of following limitations: patching a power-on reset (POR) register using one or more tuned values stored in a list in one or more sectors, the list comprising an address of the POR register to be patched and the tuned value.

Art Unit: 2187

The prior art of record including the disclosures of Ono et al. (6,636,985 B1), Hobson et al. (6,456,452 B1), and Smith (5,617,339 A) neither anticipates nor renders obvious the above-recited combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays should be clearly labeled "Comments on Statement of Reasons for Allowance"
